

Part 9 – Creadify SEO & Performance Blueprint

1. SEO Strategy

Focus on intent-based keywords related to digital marketing, SEO, paid advertising, web design, branding, CRO, and business growth. Each section should target a unique search intent.

2. Keyword Mapping

Assign one primary keyword and 2–5 secondary keywords to each major section. Avoid keyword cannibalization and naturally incorporate phrases into headings and body content.

3. Metadata

Create unique title tags (50–60 characters) and meta descriptions (140–160 characters) for every page. Use compelling language that encourages clicks.

4. Semantic HTML

Use one H1, logical H2/H3 hierarchy, semantic elements (, , ,) and descriptive link text.

5. Structured Data

Implement Schema.org markup for Organization, LocalBusiness, Service, FAQPage, Breadcrumb, and WebSite where appropriate.

6. Open Graph & Social Sharing

Configure Open Graph and Twitter Card metadata with optimized titles, descriptions, and branded preview images.

7. Image Optimization

Compress images, serve modern formats (WebP/AVIF), define width and height attributes, use descriptive filenames, and write meaningful alt text.

8. Core Web Vitals

Target: LCP under 2.5s, INP under 200ms, CLS below 0.1. Minimize layout shifts and optimize critical rendering paths.

9. Performance Optimization

Lazy-load below-the-fold media, preload critical fonts, defer non-essential JavaScript, minify CSS/JS, enable compression, and leverage browser caching.

10. Accessibility

Meet WCAG AA standards with keyboard navigation, visible focus states, sufficient color contrast, semantic markup, and screen-reader-friendly labels.

11. Internal Linking

Connect related sections using anchor links and maintain clear navigation to improve crawlability and user experience.

12. Analytics & Tracking

Integrate Google Analytics 4, Google Search Console, Meta Pixel, LinkedIn Insight Tag, and conversion tracking for form submissions and CTA clicks.

13. Lighthouse Targets

Aim for 95+ scores in Performance, Accessibility, Best Practices, and SEO. Regularly audit using Lighthouse and PageSpeed Insights.

14. Deployment Checklist

Verify sitemap.xml, robots.txt, canonical URLs, HTTPS, favicon, structured data validation, redirects, broken links, and indexing status before launch.
